Department of Social and Behavioral Sciences**

**SBHS 237, Neuropsychology**

**1. Course learning outcomes**

This course is designed to provide an understanding of the fundamentals of human neuropsychology, the study of behaviour in relation to brain function. The course surveys how the human brain is structured and organized and how it functions in order to produce movement and perception, as well as language, memory, and feeling. Toward this end it draws upon knowledge acquired from studies of animal brains, of neurologically intact humans and of patients with brain dysfunction.
